10th Anniversary Celebration

Dear Colleague:

I am very pleased to invite you to attend a scientific symposium organized to celebrate the 10th Anniversary of the Department of Pain Medicine and Palliative Care (DPMPC) at Beth Israel Medical Center. In the decade since the DPMPC was founded as the nation's first academic department devoted to the two specialties of pain medicine and palliative care, great strides have been made in both disciplines. Our symposium will highlight some of the key advances in pain neurobiology, analgesic pharmacology, quality-of-life concerns in the medically ill, and emerging systems of care. Please help us celebrate our clinical and academic achievements by joining us for this unique educational opportunity.

Cordially,

Russell K. Portenoy, MD
Chairman

LEARNING OBJECTIVES

At the conclusion of this symposium, you will be able to:

- Evaluate the ongoing controversies in chronic pain management and palliative care in order to provide the best care for your patients.
- Review the risks and benefits of opioid therapy for chronic malignant and nonmalignant pain, including opioid use in breakthrough pain, in order to better explain opioid titration and rotation, and common side effects, to your patients.
- Examine your use of opioids to manage pain in patients with histories of substance abuse or addiction, and assess whether you have been using pain medications optimally.
- Review genetic and environmental contributions to pain perception, and incorporate this knowledge into your treatment plans for your patients.
- Review the latest interventional strategies for pain management, and recognize when these strategies should be implemented.

TARGET AUDIENCE

This course is intended for: pain specialists (anesthesiologists and neurologists), palliative care specialists, nurse practitioners, registered nurses, pharmacists, social workers, and medical students.
